Session Statistics

Duration:08:14

Variable speed version: [Watch](#) [1]

This video provides an overview of the versatile Session Statistics Indicator. Session Statistics allows the user to compute price of volume based statistics of various durations: day, week, month, 6-month, year, or chart. Examples include the low of the week, the high of the 1st 60 minutes of the session, the midpoint of the overnight period, the high of the previous month/week/day. A powerful multi-session statistic option enables the user to compute such results as the average volume of each 30-minute period based on past days (can limit to same day of week), the median range of the past 20 weeks, the median developing range as of each bar based on data of previous 20 days.
