Home > Modified Moving Average
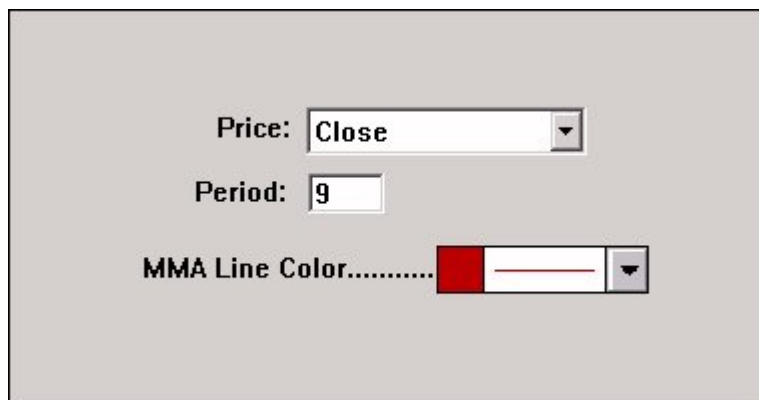

# Modified Moving Average [1]

The Modified Moving Average is an algebraic technique that makes averages more responsive to price movements. The average includes a sloping factor to help it catch up with the rising or falling value of the security.

## Presentation

Above is a One Minute Bar Chart of Real Networks(RNWK). The Modified Moving Average is seen as a red line in the chart. This moving average uses the preferences seen below.

**Preferences:**

- **Price** -The price data used in calculation of the Modified Moving Average.
- **Period** -The period used to calculate the Modified Moving Average.
- **MMA Line Color** -Color of the MMA line in the chart.

## Formula  Copy

```
Y = Modified Moving
Average
N = Number of
Periods used
T = total of last N
```

Smoothing [2]Other [3]
