

[Time Series Forecast \(TSF\)](#) [1]

This technical indicator performs linear regression analysis. The value of TSF for each bar is based on a regression analysis of the preceding N bars. N is called the regression period in the setup window for TSF. The user specifies a forecast period F. F is used to derive a predicted price value, a forecast, F periods in the future based on the slope of the regression line for the preceding N periods. This indicator is often used in trading systems in conjunction with a moving average to generate trading signals when a moving average line crosses a time series forecast line.

Presentation

Above is a 15 Minute Continuous Line Chart of the Dow Jones Industrial Index (INDU). The bold green line represents the Time Series Forecast based on the preferences specified below.

Preferences:

MA Type	MA Period	Price
Simple	9	Close
Regression Period:		9
Forecast Period:		3
TSF Line Color.....		

- MA Type -
- MA Period -
- Price -
