Investor/RT Core Platform

50/mo.

- [Real Time Language (RTL)](#) [4] is Investor/RT's easy-to-use scripting language for creating Custom Indicators, Signals and Scans.
- [Trading Rule Indicator](#) [5] allows users to associate Signals written in RTL with the execution of predefined Trading Orders.
- [Session Statistics Indicator](#) [6] is a powerful tool that computes historical statistics for an instrument or an indicator.
- [ZigZag Indicators](#) [7] consist of both an Indicator and an Oscillator that automatically connect significant tops and bottoms with trendlines and labels based on predefined settings.
- [RTX® Development tools](#) [8] allow users with C++ programming skills and software developers to extend the Investor/RT charting platform with custom studies. The RTX SDK is a modern C++ toolkit that provides easy access to market data, historical bar data, and market depth in real-time.
- 30+ Core RTX® Indicators including [ChartTradingDOM](#) [9], [FlexLevels®](#) [10], [Zones](#) [11],

SessionPrices [12], Clock [13] and many others.

25/mo.

VolumeScope® Package

VolumeScope [28] and the Price Volume Patterns (PVP) RTX extension comprise the VolumeScope package. The extension is available as an ala carte add-on to the I/RT Core Platform. I/RT Professional Trader includes VolumeScope as well as all additional feature packages. Watch [29] the VolumeScope announcement video.

VolumeScope is a powerful new extension to Investor/RT featuring detailed analysis and display of market order flow. VolumeScope puts each bar in the chart under the microscope, revealing and displaying volume at price data with great flexibility. The VolumeScope indicator consists of three primary components: Background [30], Text and Candle [31]. For each component, VolumeScope provides a variety of data and presentation options for customizing the display. Volume is separated into Ask-Traded Volume (Buying) and Bid-Traded Volume (Selling) at each price. The VolumeScope RTX extension builds upon this information with profiling, coloring and scaling options based upon relative volume, delta, imbalance and much more.

Price Volume Pattern (PVP) [23] is a powerful order flow pattern matching facility that works hand-in-hand with VolumeScope. It is designed to identify buy and sell volume-based patterns within a sequence of one or more prices within each bar. One-price, two-price and three-price patterns can be identified at the high of bar, low of bar, the highest or lowest occurrence within the bar, or all occurrences within each bar.

10/mo.

MarketDepth Analysis Package

Includes [Trail of Intentions RTX Extension](#) [32] (TINT)

10/mo.

Trading Systems Package

Includes [Backtesting](#) [33], [Optimization](#) [34], [Trading System Indicator](#) [35]
